EDUCATION

Dalhousie University | Halifax, NS

Bachelor of Computer Science, with Music Minor | Co-op Program

2023/9-2027/9(Expected)

- CGPA: 3.75 / 4.3
- Software Engineering (A+) | Data Structures & Algorithms (A+) | Web Design & Development (A+) | Database System (A-)

SKILLS

- **Programming languages:** C#, C++, TypeScript, Java, Python, JavaScript, GLSL
- **Frameworks & Libraries:** React.js, HTML/CSS, Express.js, Node.js, Junit
- **Tools:** Git, GitHub, Agile / Scrum, n8n (No-Code Workflow Automation), Android Studio, SQL, Firebase, MongoDB

ACADEMIC PROJECTS

My Portfolio – Full Stack Dev

2025/10 – 2025/12

- Designed a **component based React + Vite frontend** with a retro game aesthetic to showcase projects, connections, and contact channels, increasing interactivity and user engagement.
- Built a **parallax** landing page with clickable NPC interactions and smooth character animation transitions.
- Integrated **authentication and role-based authorization** using LinkedIn and Google OAuth APIs.
- Developed a **Node.js backend** integrating multiple external services: YouTube API for performance media, OAuth-secured testimonials, Resend for contact workflows, and MongoDB for persistent comment storage.

Housing Price Predictor – Supervised Learning

2025/11 – 2025/11

- Implemented an end-to-end supervised learning pipeline to predict housing prices from real-world data using Python.
- Engineered and refined features by addressing missing values, outliers, and highly skewed distributions using log transformation.
- Benchmarked multiple models — Linear, Ridge, Lasso, Random Forest, and Gradient Boosting — to identify performance trade-offs.
- Evaluated and compared models using RMSE, MAE, R^2 , and MAPE, selecting the best-performing approach based on validation results.

Dal Tutor – Software Dev

2025/9 – 2025/12

- Led frontend development in an **Agile** pair-programming team, delivering **100% functional** Android prototype within **2 sprints**.
- Designed and implemented a **dashboard interface** with Android fragments, following TDD by writing tests prior to feature development.
- Integrated Google Maps API for tutor discovery and implemented CRUD operations for tutorial data.
- Streamlined project architecture through **iterative refactoring** guided by **SOLID and Clean Code practices**, resulting in a more scalable and testable codebase.

Easy Shopping – AI Agent

2025/9 – 2025/10

- Developed an AI agent using **n8n** (no-code platform) and integrated it with **WhatsApp API** to simulate real-world customer interactions.
- Designed an **online grocery system** with a **dynamic inventory database** and automated order management, achieving **full process automation**.
- Implemented **MongoDB** to optimize chat memory storage, significantly improving chat memory capacity and consistency.

HACKATHONS

Sustainable AI--Cognizant BrAInstorm Challenge

2025/11/7-- 2025/11/9

- Collaborated in a team of **3** to develop a social app promoting sustainable actions through AI-driven engagement.
- Developed a frame-based video verification feature using OpenAI API to validate submissions and trigger automated point increments.

Ice Spy – MDA Mission Accepted Challenge

2025/10/24-- 2025/10/26

- Engineered a modern frontend interface with TypeScript and Mapbox API to display dynamic map data and user routes.

CERTIFICATES & ACHIEVEMENTS

- Foundations of **Full Stack Development** **Shiftkey Labs, Dalhousie University**
- Foundations of **Agentic AI** **ShiftKey Labs, Dalhousie University**
- Introduction to **Supervised Learning** **Dalhousie Machine Learning Society**
- Delivered **two 1-hour pop music compilations** at Dalhousie University's dining hall for **100+ attendees**, earning **enthusiastic audience response** and recognition on Dalhousie's **social platforms**.
